Year One

Area One Plant Type 1 Peppers, Tomato, Eggplant, Potato	Area Two Plant Type 2 Cauliflower, Cabbage, Broccoli, Lettuce
Area Three Plant Type 3 Peas, Beans, Pole Beans 7 N Nitrogen 14.0067	Area Four Plant Type 4 Cucumbers, Squash. Corn, Pumpkins

Year Two

Area One Plant Type 4 Cucumbers, Squash. Corn, Pumpkins	Area Two Plant Type 1 Peppers, Tomato, Eggplant, Potato
Area Three Plant Type 2 Cauliflower, Cabbage, Broccoli, Lettuce	Area Four Plant Type 3 Peas, Beans, Pole Beans 7 N Nitrogen 14.0067

Year Three

Area One Plant Type 3 Peas, Beans, Pole Beans 7 N Nitrogen 14.0067	Area Two Plant Type 4 Cucumbers, Squash. Corn, Pumpkins
Area Three Plant Type 1 Peppers, Tomato, Eggplant, Potato	Area Four Plant Type 2 Cauliflower, Cabbage, Broccoli, Lettuce

Year Four

Area One Plant Type 2 Cauliflower, Cabbage, Broccoli, Lettuce	Area Two Plant Type 3 Peas, Beans, Pole Beans 7 N Nitrogen 14.0067
Area Three Plant Type 4 Cucumbers, Squash. Corn, Pumpkins	Area Four Plant Type 1 Peppers, Tomato, Eggplant, Potato

Crop Rotation: A Four Year Cycle

Crop rotation is an essential piece of knowledge and organizational strategy to have on an organic farm for many reasons. Other than reintroducing key minerals back into the soil by rotating the crops correctly it will reduce insect infestation, allow for reduced water usage, prevent weed growth, limit soil erosion and create a good environment for living organisms in the soils.
