

program

Program is shifted and transformed into a bar. Bar is then pushed and pulled to orient with contours and to optimize views and daylight. Fermentation and kitchen program is placed lower compared to boiling room so spaces can be gravity feed clean water and beer product.

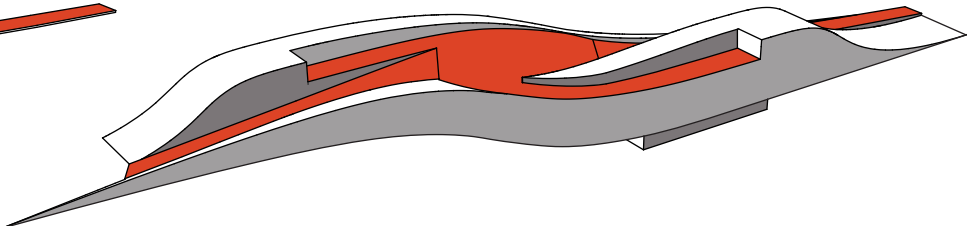

circulation

Main pathway moves up into a central space. This central space acts as a node to connect all spaces together.

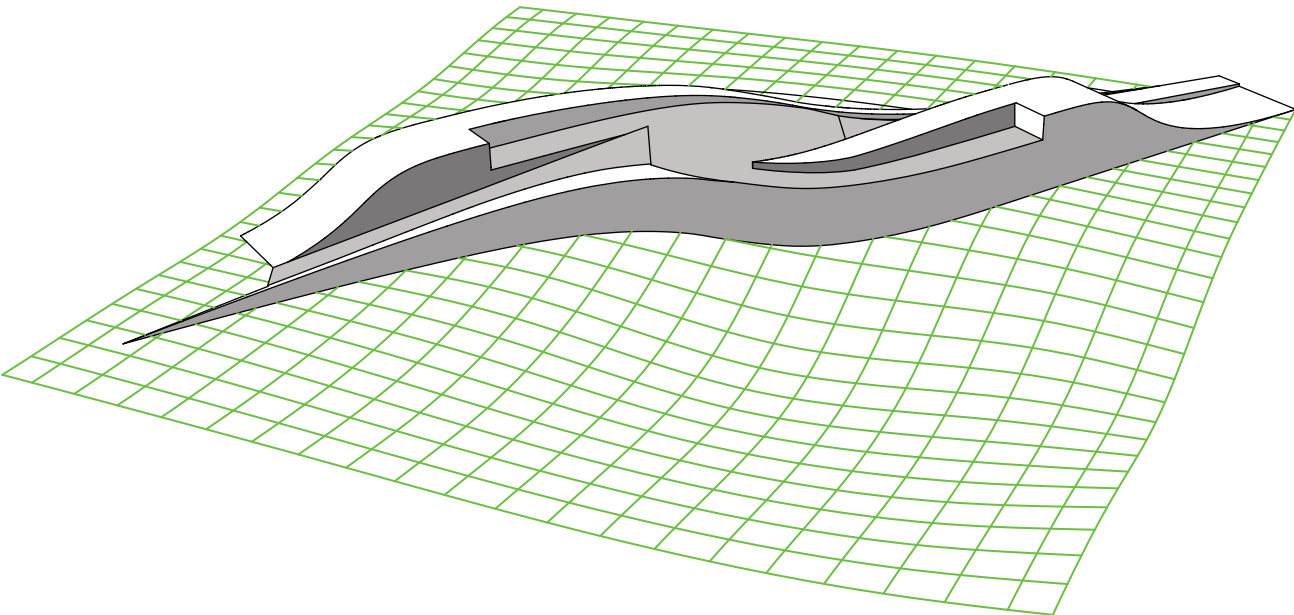

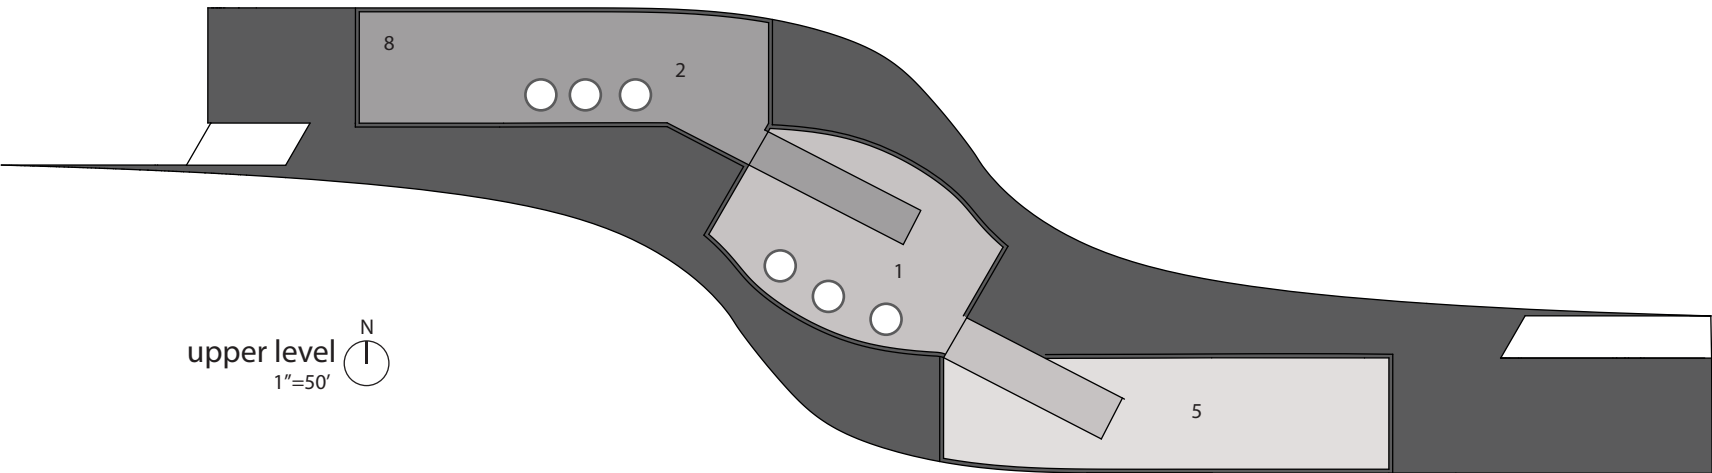

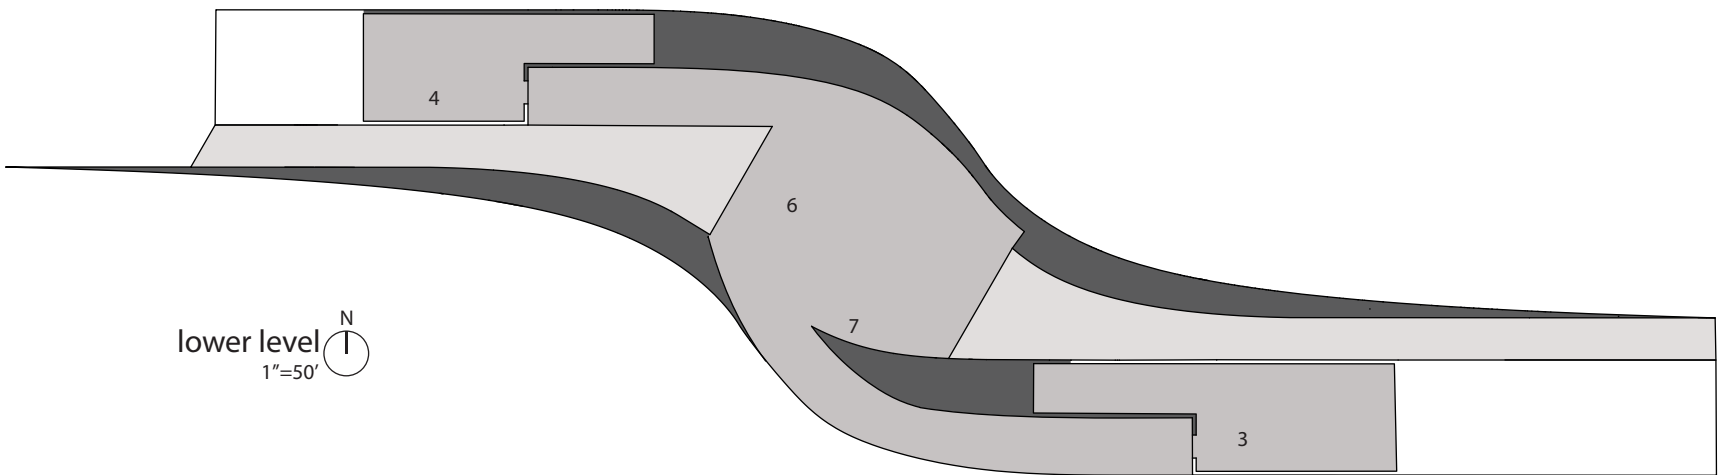

connectivity

Program spaces are nested inside circulation. Program spaces provide unique opportunities to look down or up and see the brewery production. Points of intersection become threshold to the spaces.

form

Main pathway shapes buildings form. Form of the building is designed to be integrated into the landscape. Restaurant and Brewery tasting spaces are directly connected to main central plaza in order to create a beer garden/ outdoor seating area with a view of the entire area.

brewery and restaurant building design concept

- 1. fermentation and bottling
- 2. boiling and mashing
- 3. indoor dining area
- 4. beer tasting room
- 5. indoor kitchen
- 6. beer gardens
- 7. outdoor dining area
- 8. storage
- circulation
- upper
- medium
- lower
