

## program

Program is shifted and transformed into a bar. Bar is then pushed and pulled to orient with contours and to optimize daylight. Fermentation and kitchen program is placed lower compared to boiling room so spaces can be gravity feed clean water and beer product.

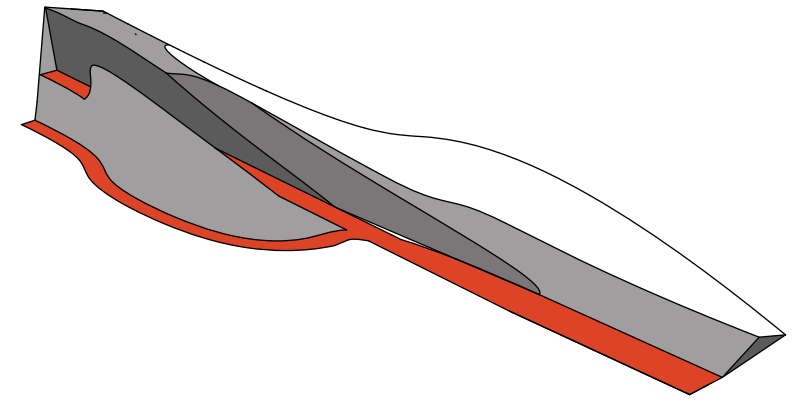

## circulation

Main pathway follows contours and acts a simple gesture connecting all the spaces and program. This circulation space acts as a ramp to access upper level program.

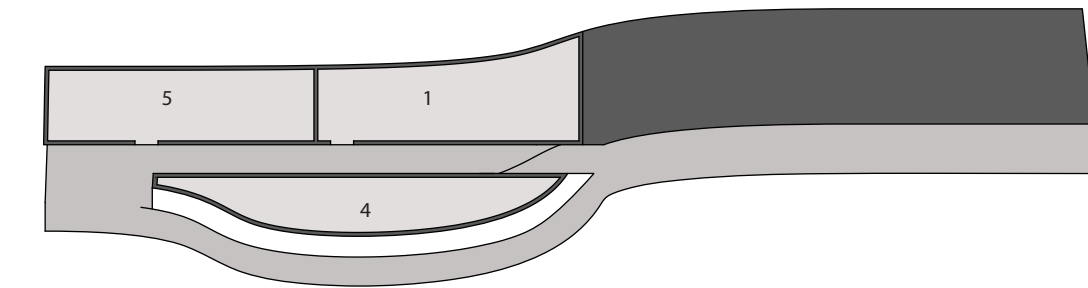

## connectivity

Program spaces are nested next to circulation. Circulation then cuts into program spaces

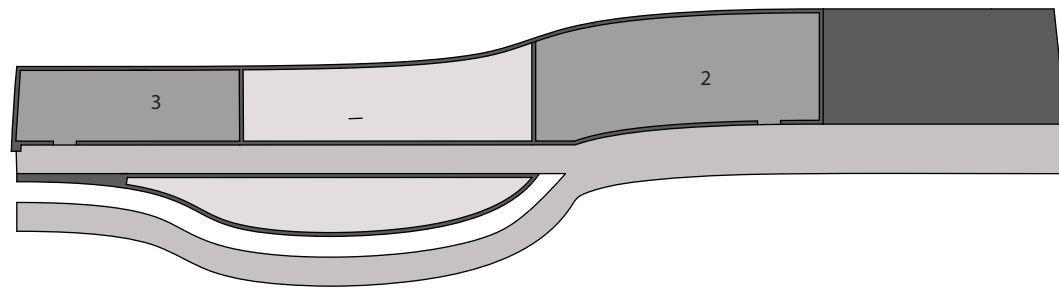

## form

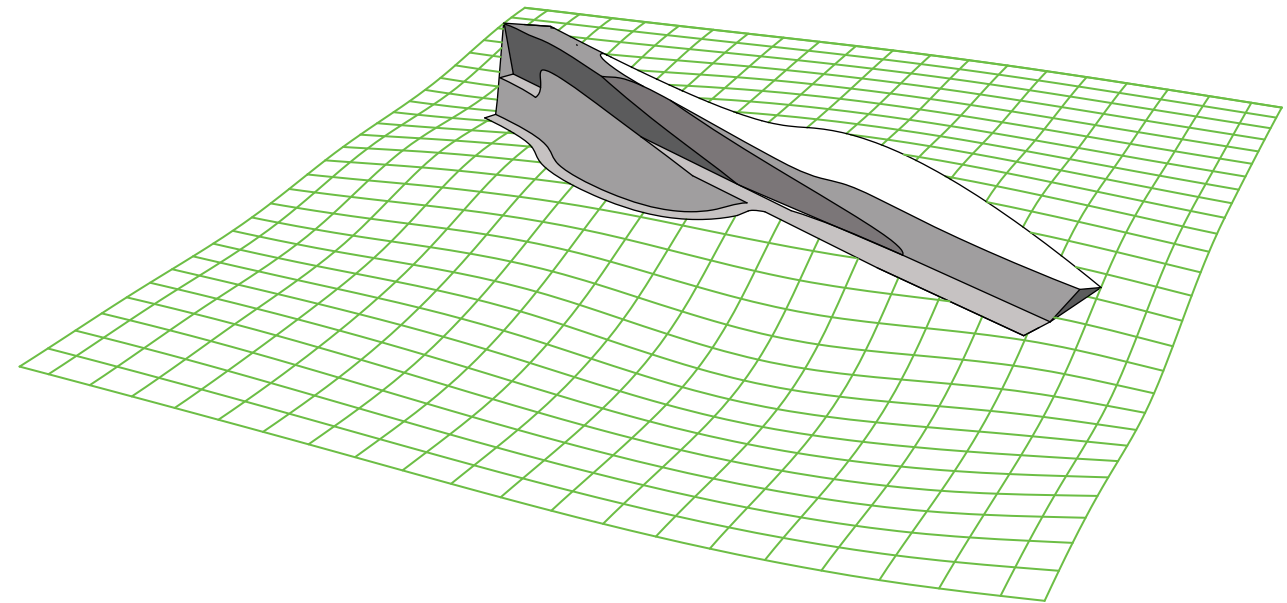

Buildings form is created by sweeping a gable shape along two curves that outline the height and perimeter of the building. Form is very organic with the circulation sliced into it.

lower level  
1"=50'

upper level  
1"=50'

## brewery and restaurant building design concept

- 1. fermentation and bottling
- 2. boiling and mashing
- 3. indoor dining area
- 4. beer tasting room
- 5. indoor kitchen

- circulation
- upper
- medium
- lower
